

DR. DIKSHA SUNITA VENUGOPAL

San Francisco Bay Area, CA | (617) 230-5828 | dikshavenugopal@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Doctor and **clinical research professional** with a **Master of Public Health in Epidemiology & Biostatistics**, bringing hands-on experience supporting the **planning, coordination, and execution of clinical and human-subject studies** across oncology, public health, and medical device settings. Experienced in **participant-facing research, study logistics, protocol implementation, clinical data collection, and regulatory documentation**. Collaborative in working with investigators, research staff, sponsors, and multidisciplinary teams. Skilled at keeping studies organized, on track, and aligned with **protocol objectives, timelines, and quality expectations**, while maintaining accurate documentation and meaningful data to support analysis and decision-making. Recognized for strong organizational skills, attention to detail, and the ability to connect effectively across clinical, experimental, and analytical teams.

EDUCATION

Boston University, Boston, MA

Master of Public Health, Epidemiology and Biostatistics

Related Courses: Biostatistics, Epidemiology, Quantitative Methods of Public Health, SAS, SPSS

SVYASA University, Bangalore, India

Bachelor of Naturopathic Medicine and Yogic Sciences (Integrative Medicine)

Related Courses: Anatomy, Physiology, Pathology, Community Medicine, Research Methodology, Nutrition, Gynecology, Acupuncture

SKILLS

Clinical Study Operations:	Clinical study coordination, study execution, study logistics, protocol implementation, participant recruitment, eligibility screening, informed consent, clinical data collection
Analysis:	R, SAS, SPSS, Excel, data interpretation, statistical analysis, experimental design, data visualization
Clinical Research & Patient Care:	Participant recruitment, informed consent, patient monitoring, clinical data collection
Regulatory Compliance & Ethics:	IRB protocol management, HIPAA compliance, Good Clinical Practice (GCP) guidelines

CLINICAL RESEARCH LEADERSHIP

Serve as the **sole research coordinator for oncology clinical studies**, independently supporting **study planning, execution, and logistics** while serving as the central point of coordination across investigators, sponsors, regulatory teams, and multidisciplinary clinical staff. Maintain ownership of operational study workflows, including **participant recruitment, eligibility review, informed consent, protocol implementation, study documentation, clinical data collection, and cross-functional coordination** to ensure study activities remain aligned with study objectives, timelines, and quality standards.

EXPERIENCE

Contra Costa Health Center

Martinez, CA

Cancer Research Coordinator

May 2025 – Present

- **Lead the operational coordination and execution of 8+ concurrently active NCI-funded clinical trials**, maintaining oversight of study workflows, regulatory requirements, participant activities, data quality, and cross-functional communication across investigators, sponsors, and multidisciplinary clinical teams.
- Lead **clinical research data collection and study documentation activities**, ensuring accurate entry of participant information into electronic systems and consistent adherence to protocol requirements.
- Drive **data quality and completeness** through ongoing review of study records, source documentation, and case materials, identifying discrepancies and ensuring timely resolution of missing or inconsistent information.
- Manage clinical study documentation in a **compliant, audit-ready manner**, maintaining organized research records in alignment with **IRB, GCP, HIPAA, FDA, and institutional standards**.
- Partner cross-functionally with investigators, sponsors, research nurses, and regulatory personnel to ensure clinical data capture, study documentation, and operational workflows remain aligned with study objectives and reporting expectations.
- Oversee **adverse event and serious adverse event documentation**, ensuring completeness, accuracy, and timely reporting to investigators, sponsors, and IRB teams in accordance with regulatory timelines.
- Support **sponsor monitoring visits, audits, and internal reviews** by preparing essential study documentation, addressing findings, and maintaining inspection-ready files and records.
- Manage multiple studies and operational priorities simultaneously in a fast-paced oncology research environment, facilitating

communication regarding participant status, study progress, and documentation issues while maintaining strong accountability.

Fenway Health / The Fenway Institute and Boston Medical Center

Boston, MA

Biostatistics & Public Health Researcher

Jan 2025 – May 2025

- Applied **advanced statistical methods using SAS, R, and Python** to analyze outcomes among HIV patients with substance use, generating insights related to treatment adherence, clinical outcomes, and broader public health implications.
- Supported **participant recruitment and study data collection** across hospital-based and community-based settings, helping ensure smooth execution of protocol-driven research activities.
- Managed study data workflows by collecting, entering, cleaning, and reviewing research data in **REDCap and statistical platforms**, strengthening data quality, completeness, and readiness for analysis.
- Maintained **regulatory compliance** by preparing and managing IRB documentation, including amendments, renewals, and study-related materials, in accordance with federal, institutional, and ethical research standards.
- Sustained organized and protocol-aligned study records, helping ensure research activities remained on track with approved objectives, timelines, and documentation requirements.
- Collaborated closely with investigators and research teams to support study procedures, address data and documentation issues, and facilitate accurate communication of research progress.
- Contributed to **high-quality analytic datasets and research outputs** by combining participant-facing study support with strong quantitative, regulatory, and operational coordination skills.

HCG (Health Care Global – Cancer Hospital)

India

Oncology Physician-Researcher

Oct 2023 – Dec 2023

- Partnered with physicians across **8 multidisciplinary oncology departments** to support integrated, patient-centered cancer care through coordinated clinical and supportive care delivery.
- Performed **comprehensive patient assessments**, including history-taking, symptom review, and supportive care planning, ensuring care recommendations remained aligned with oncology treatment protocols and individual patient needs.
- Delivered psychological counseling and supportive care to **30+ oncology patients**, contributing to improved treatment adherence, emotional support, and quality of life throughout chemotherapy, radiation, and surgical interventions.
- Facilitated patient and caregiver education on treatment side effects, nutrition, lifestyle modification, and rehabilitation, strengthening understanding, engagement, and continuity of care.
- Contributed to **clinical documentation, case discussions, and multidisciplinary treatment planning**, supporting the hospital's research-informed and collaborative oncology care model.
- Integrated complementary and rehabilitative care approaches into oncology support plans to address holistic patient needs alongside conventional treatment pathways.

PROJECTS

Epidemiologic Evaluation of Systolic Blood Pressure and Cardiovascular Mortality Using Cox Proportional Hazards Modeling

Applied **Cox proportional hazards modeling** to evaluate the relationship between systolic blood pressure and cardiovascular mortality, using time-to-event analysis to assess risk patterns and interpret epidemiologic associations.

Multivariable Regression of Vitamin D Deficiency: Genetic and Environmental Factors

Conducted **multivariable regression analysis** to evaluate genetic and environmental factors associated with vitamin D deficiency, examining independent predictors, potential confounding factors, and their epidemiologic relevance.

Epidemiologic Assessment of the Association Between Peer Victimization and Suicidal Behavior in a Nationally Representative Adolescent Population

Conducted an **epidemiologic assessment of peer victimization and suicidal behavior** in a nationally representative adolescent population, examining population-level associations and their implications for adolescent mental health and public health.
